1. GENERAL

1.1 Description

Kikusui Model COS6100 Oscilloscope is a universal-type portable oscilloscope which is capable of 5-channel 12-trace display. It employs a 6-inch rectangular type cathode-ray tube with red internal graticule.

The COS6100 oscilloscope is sturdy, easy to operate, and extremely reliable. This scope has many convenient features and special functions which make it an ideal instrument for diversified types of research and development of electronic equipment. It can also be efficiently used in production line maintenance and service applications.

1.2 Features

The features of the COS6100 Oscilloscope can be summarized as follows:

(1) Ease of use:

Light torque lever switches and pushbutton switches are used. These and other controls are laid out in the most convenient locations making the oscilloscope extremely easy to operate.

(2) Clear waveform observation:

The cathode-ray tube is a 6-inch large-screen rectangular type CRT with a red internal graticule of 80 mm × 100 mm (3.15 in. × 3.94 in.) The red graticule produces a high resolution background for easy waveform viewing.
(3) High acceleration voltage (20 kV):

The high acceleration voltage of the CRT ensures a bright trace for observation and photography.

(4) High sensitivity and wide frequency bandwidth:

The maximum vertical sensitivity is 1 mV/DIV (with ×5 MAG) and the frequency response is 100 MHz or greater (-3 dB).

(5) High input impedance:

The input impedance of CH1, CH2, CH3, CH4 and CH5 (EXT TRIG) is $1 \, \text{M} \Omega \pm 1\%$, 20 pF ±2 pF, allowing the use of 10× Probes.

(6) 5-channel simultaneous display:

The COS6100 employs a new type of vertical mode switching circuit which enables display of any combination of CH1, ADD (CH1 ± CH2), CH2, CH3, and TRIG VIEW (CH4 and CH5). Up to five channels can be displayed simultaneously; up to twelve traces can be displayed when in the alternate sweep mode.

(7) Trigger level lock:

A new trigger level lock circuit eliminates the requirement of triggering adjustments on most signals. (Manual control is still available for triggering on complex waveforms.)
(8) Stable alternate triggering function:

When in the alternate triggering mode, stable triggering can be attained even when the signals of CH1, CH2 and CH3 are not time released. (patent pending)

(9) TV sync triggering:

The COS6100 has a sync separator circuit, which allows triggering for TV V signal and TV H signal. It is automatically switched with the TIME/DIV control.

(10) B END'S A switch separated from holdoff control knob:

The B END'S A switch is installed separately from the holdoff control switch. Holdoff control can be used while in the B END'S A mode.

(11) Maximum sweep time 2 nsec/DIV with ×10 MAG function:

With the ×10 MAG function, the highest sweep speed of 20 nsec/DIV can be multiplied by a factor of 10 to attain a maximum sweep speed of 2 nsec/DIV.

(12) Alternate sweep:

The A sweep and the delayed sweep can be viewed simultaneously in the alternate mode.
(13) Linear focus:

Once the beam focus is adjusted, it is automatically maintained in this state regardless of changes in intensity.

(14) Multiple-channel X-Y operation:

By using the CH3 HOR channel as the X-axis input and all other channels as the Y-axis inputs, up to four channels of X-Y operation can be viewed.
2. SPECIFICATIONS

ERRATA SHEET

Throughout manual, reference of Model COS 6100 change to P/N COS 6100M.
The reference of TV sync is changed to AC LF REJ.

Ratios to 1/2.5, etc. throughout manual are changed to 1:2.5, etc.

Page 8 - A Trigger Sensitivity and B Trigger Sensitivity are changed as follows:

DC: 0.3 div internal or 50 mV P-P external from DC to 25 MHz.
1.0 div internal or 150 mV P-P external from 25 MHz to 100 MHz.

AC: 0.3 div internal or 50 mV P-P external from 30 Hz to 25 MHz.
1.0 div internal or 150 mV P-P external from 25 MHz to 100 MHz.

LF REJ: 0.3 div internal or 50 mV external from 15 kHz to 25 MHz.
1.0 div internal or 150 mV external from 25 MHz to 100 MHz.

HF REJ: 0.3 div internal or 50 mV external from 30 Hz to 50 kHz.

Page 9 - Sweep time accuracy is changed to ± 3%, 0°C to 55°C.

Page 10 - Sweep time accuracy is changed to ± 3%, 0°C to 55°C.

Page 10 - Magnified sweep time accuracy for 0.1 μsec/div to 0.5 sec/div range is changed to ± 3%.

Page 10 - Linearity is changed from ± 3% to read: 0.25 minor divisions or less.

Page 12 - Calibrator output voltage is changed to read: 1 V, 200 mV.
Accuracies are changed to read: ± 2% @ 200 mV, ± 1% @ 1 V.

Page 13 - Accessories, a 1:1 and two 10:1 probes are included instead of two 10:1 probes.

Pages 22-23 - All references to TV coupling are deleted.

Pages 27-28 - All references to 2 V calibrator signal are changed to 1 V.

Page 30, Figure 4-1, Item 34 - Change TV setting to read LF REJ.

Page 43 - Reference to TV and Figure 4-7 is deleted.

Pages 80-82 - The references to TV synchronization are deleted.

Page 93, Paragraph 6.14 - The reference to the 2 V P-P is changed to 1 V P-P.

Diagram 3 - A TRIG CIRCUIT schematic diagram, the TV SYNC SEP circuit does not apply.
